**Important:**

Do not pre-mix concentrated nutrients.

Fill the reservoir with water & then add nutrients.

**Always mix Cali-Pro A with fresh water first, then add Cali-Pro B.**

Ideal water temp is 60–72°F (16–22°C).

Ideal pH range after mixing nutrients is 5.8–6.3.

Monitor plants for signs of stress when following a more aggressive feeding program.

**Notes:**

**PH UP**  
Premium pH Alkalizer

**PH DOWN**  
Premium pH Acidifier

Apply to the nutrient solution just a little at a time, testing the pH periodically until the readings are in the desired range.

**CAL-MAG**  
Calcium-Magnesium

**STURDY STALK**  
Potassium Silicate

**0.5-1.25 mL per liter**

Use when needed from early vegetative through late flowering phase. Recommended for use on water days only.  
**Do not use Cal-Mag and Sturdy Stalk in the same watering.**
