

SUPERthrive VITAMIN SOLUTION FOR BEAUTIFUL ORCHIDS!

All growth begins with the roots. SUPERthrive's non-toxic vitamin solution supports the ability of your orchids to access nutrition, providing healthier plants able to bloom again and again.

Water, light, and SUPERthrive are essential for beautiful orchids.

DOSAGE AND INSTRUCTIONS

- **Maintenance** - Just a few drops of SUPERthrive per gallon of water whenever watering occurs.
- **Bare Roots or Weak Plants** - 10 drops of SUPERthrive per gallon of water and submerge and soak for 15 minutes. If you plan to soak more than one, use fresh solution for each plant to avoid transferring diseases.
- **Repotting** - Add prepared SUPERthrive solution to the potting medium, just enough to moisten.

THE SECRET TO WATERING YOUR ORCHIDS

Did you know that more people lose their orchids to overwatering than any other reason? Water your orchids thoroughly with SUPERthrive water just as they dry out. Keep watering until the water runs freely from the drainage holes. The idea is to provide plenty of fresh oxygenated water to the roots. Then let your orchid dry completely before watering again. Do not water unless the potting mix is dry - even if it takes 2 weeks!

TRY ONE OF THESE TESTS TO SEE IF YOUR ORCHID IS READY FOR MORE WATER:

The Finger Test - Simply insert your finger into the potting mix to see if it feels damp.

The Weight Test - Feel the weight of your orchid pot. It will be much lighter when the potting mix is dry.

The Pencil Test - Insert a pencil or other wooden stake carefully into the potting mix. If the pencil is damp, wait.

When in doubt, wait 24 hours.
