

PROPAGATION AND CLONING WITH SUPERthrive VITAMIN SOLUTION

Since 1939, SUPERthrive has worked side-by-side with nurseries, tree farms, and specialty growers of all types to address the prevention and treatment of transplant shock with the goal to increase survival rates.

Our formula treats and prevents stresses commonly associated with cloning and plant establishment. Our formula increases survival and germination rates by managing stress and stimulating root growth. Apply via foliar spray or traditional watering.

SUPERthrive focus on the root system gives your seedlings and cuttings the best start possible. Start and maintain your gardens with SUPERthrive for best results!
